

EMERGENCY RESPONSE PLAN

The hurricane is the most severe of the meteorological phenomena known as tropical cyclones. These events are low pressure systems with wind, rain and electrical activity, the winds rotate counterclockwise (counterclockwise) in the northern hemisphere and clockwise in the southern hemisphere.

•Before:

- Protect windows and doors, as well as secure exterior doors and awnings.
- Secure loose objects on the roof of the house.
- Have a first aid kit.
- Disconnect electrical appliances.
- Save important documents.
- Stock up on non-perishable foods.
- Have telephones on hand.
- Detect a temporary shelter.

•During:

- Stay at home.
- Do not cross streams or water currents.
- Leave the home if the authorities so determine.

•After:

- Make sure all family members are well.
- Review the conditions of the home.
- Inform the authorities if the home was affected.
- Dislodge stagnant water.
- Take extreme food hygiene measures.
